1 Introduction

The `jmlr` class was designed primarily for the Journal of Machine Learning Research Workshop and Conference Proceedings (JMLR W&CP) based on the `jmlrwcp2e` package to make it easier for production editors to combine articles into a single book.

The `nowcp` option implements the `jmlr2e` style to make it easier to include reprints from JMLR articles. If you are an author wanting to submit an article to the JMLR, please see their guidelines and use their official package.

Since the creation of this class, the JMLR W&CP has changed its name to the Proceedings of Machine Learning Research (PMLR). Articles submitted to the PMLR should use the `pmlr` option. Reprints of old JMLR W&CP articles should use the `wcp` option.

The `jmlrbook` class was provided to combine articles that use the `jmlr` class into a book. The `combine` class internally used by `jmlrbook` has stopped work following changes to the L^AT_EX kernel in 2020. This means that the `jmlrbook` class is now deprecated. This only affects production editors not article authors.

As from v1.24, some non-class dependent commands and environments have been moved to a new package `jmlrutils` (see Section 2.5). This package is automatically loaded by `jmlr`, but may be used with other classes. (Note that you will need to explicitly load `algorithm2e` if you want to use the `algorithm` environment.)

Note that the `jmlr` (and therefore `jmlrbook`) class automatically loads the `hyperref` package, but some packages need to be loaded before `hyperref`.

Anything that needs to be done before `hyperref` is loaded can be specified by defining the command

`jmlrprehyperref`

```
\jmlrprehyperref
```

before the class is loaded. For example, to load the packages `foo` and `bar` before `hyperref`, you can do:

```
\newcommand{\jmlrprehyperref}{\usepackage{foo,bar}}
\documentclass{jmlr}
```

1.1 Required Packages

The `jmlr` class is based on the `article` class and loads the following packages: `jmlrutils` (see Section 2.5), `amsmath`, `amssymb`, `natbib`, `url`, `graphicx` and `algorithm2e`, `hyperref`, `nameref`, `xcolor`

and `xkeyval`. Note that unlike the `jmlr2e` and `jmlrwcp2e` packages, this class file does not load the obsolete `epsfig` package.

2 Guidelines for Article Authors

Article authors should use the `jmlr` class with the `pmlr` option. This class comes with the example file `pmlr-sample.tex`, which can be used as a template.

The following class options are available:

`pmlr` The article is for the Proceedings of Machine Learning Research (PMLR).

`wcp` The article is for JMLR Workshop and Conference Proceedings (JMLR W&CP).

`nowcp` The article is for the Journal of Machine Learning Research (default).

`twocolumn` Use two-column style. The title and author information will span both columns through the use of the optional argument of `\twocolumn`. This means that no page break can occur in the title and author list.

`onecolumn` Use one-column style (default).

`color` Color version (see Section 2.6).

`gray` Grayscale version (see Section 2.6).

`tablecaption=top` in a table environment, `\floatconts` puts the caption at the top.

`tablecaption=bottom` in a table environment, `\floatconts` puts the caption at the bottom.

`cleveref` This option is passed to `jmlrutils` (see Section 2.5).

`nocleveref` This option is passed to `jmlrutils` (see Section 2.5).

2.1 Title Information

The `jmlr` class uses different syntax from `jmlr2e` and `jmlrwcp2e` to specify the title information. In particular, it doesn't define `\jmlrheading` and `\ShortHeading`. Instead, the following commands should be used:

`\jmlrvolume`

`\jmlrvolume{\<number>}`

This specifies the volume number. For example:

`\jmlrvolume{2}`

\jmlryear

```
\jmlryear{\<year>}
```

This specifies the year. For example:

```
\jmlryear{2010}
```

\jmlrsubmitted

```
\jmlrsubmitted{\<date>}
```

This specifies the submission date.

\jmlrpublished

```
\jmlrpublished{\<date>}
```

This specifies the publication date.

\jmlrworkshop

```
\jmlrworkshop{\<title>}
```

This specifies the workshop title (for use with the wcp class option).

The title information is specified using the commands described below. These commands should typically go in the preamble. As with most class files, The title itself is produced using

\maketitle

```
\maketitle
```

This command should go after \begin{document}. For example:

```
\begin{document}  
\maketitle
```

Before \maketitle, you must specify the title information using the following commands:

\title

```
\title[\<short title>]{\<title>}
```

This specifies the article's title. A short title for the page header can be supplied via the optional argument *<short title>*. If you want to force a line break in the title, use

\titlebreak

```
\titlebreak
```

instead of \newline or \\ as this will ensure that the line break doesn't also end up in the table of contents or bookmarks when the article is included in a book. If there is content within the title that should not appear in the page headings or table of contents (for example, a footnote) use

```
\titletag
```

```
\titletag{{title only stuff}}
```

For example:

```
\title{An Interesting Paper\titlebreak  
With a Line Break\titletag{\thanks{and an  
acknowledgement}}}
```

```
\editor
```

```
\editor{{name}}
```

This specifies the editor's name. If there is more than one editor, use:

```
\editors
```

```
\editors{{names}}
```

```
\author
```

```
\author{{author specs}}
```

This specifies the author. The specifications *<author specs>* are a bit different to jmlr2e and jmlrwcp2e. Use

```
\Name
```

```
\Name[{{abbreviated name}}]{{author's name}}
```

to specify the author's name. Note that if the surname contains a space it must be grouped (enclosed in braces {}). Similarly if the initial letter of each forename is a diacritic it must be grouped. If the abbreviation of the name doesn't get parsed properly you can override the default using the optional argument. (See below for examples.)

If there is any content within *<author's name>* that shouldn't get copied to the header, footer or table of contents, it should be enclosed within the argument of

```
\nametag
```

```
\nametag{{title only stuff}}
```

For example:

```
\Name{Ann Other\nametag{\thanks{formerly with some other  
institute}}}
```

Ensure no space occurs before \nametag otherwise the surname will be interpreted as an empty string because the space is used to separate the forenames from the surname.

\Email

```
\Email{{author's email}}
```

This specifies the author's email address. It should only be used within the argument to \author.

\and

```
\and
```

This should be used to separate two authors with the same address.

\AND

```
\AND
```

This should be used to separate authors with different addresses.

\\"

```
\\"
```

This should be used before an author's address or between authors with the same address where there are more than two authors.

\addr

```
\addr
```

This should be used at the start of the address.

Example 1 Two authors with the same address:

```
\author{\Name{Jane Doe} \Email{abc@sample.com}\and  
       \Name{John {Basey Fisher}} \Email{xyz@sample.com}\\"  
       \addr Address}
```

In this example, the second author has a space in his surname so the surname needs to be grouped.

Example 2 Three authors with the same address:

```
\author{\Name{Fred Arnold {de la Cour}} \Email{an1@sample.com}\\"  
       \Name{Jack Jones} \Email{an3@sample.com}\\"  
       \Name{{\E}louise {\E}abhla Finchley} \Email{an2@sample.com}\\"  
       \addr Address}
```

In this example, the third author has an accent on her forename initials so grouping is required.

Example 3 Authors with a different address:

```
\author{\Name{John Smith} \Email{abc@sample.com}\\\addr Address 1\\AND\\\Name{May Brown} \Email{xyz@sample.com}\\\addr Address 2}
```

Example 4 The author is actually a company so there's no first name and surname:

```
\author{\Name[Some Company, Ltd]{Some Company, Ltd}\Email{xyz:some.com}\\\addr Address}
```

2.2 Font Changing Commands

Use the L^AT_EX2_E font changing commands, such as `\bfseries` or `\textbf{<text>}`, rather than the obsolete L^AT_EX2.09 commands, such as `\bf`. (The obsolete font changing commands will produce a warning if used.)

`\url`

```
\url{<address>}
```

This will typeset `<address>` in a typewriter font. Special characters, such as `~`, are correctly displayed. Example:

```
\url{http://theoval.cmp.uea.ac.uk/~nlct/}
```

This command is provided by the `url` package which is automatically loaded.

`\mailto`

```
\mailto{<email address>}
```

This will typeset the given email address in a typewriter font. Note that this is not the same as `\Email`, which should only be used in the argument of `\author`. This command is provided by the supplementary package `jmlrutils`. Other commands are described in Section 2.5.

2.3 Structure

`abstract`

```
\begin{abstract}  
<text>  
\end{abstract}
```

The abstract text should be displayed using the `abstract` environment.

```
\begin{keywords}<keyword list>\end{keywords}
```

The keywords should be displayed using the `keywords` environment.

```
\acks
```

```
\acks{<text>}
```

This displays the acknowledgements.

```
\section
```

```
\section{<title>}
```

Section titles are created using `\section`. The heading is automatically numbered and can be cross-referenced using `\label` and `\ref`. Unnumbered sections can be produced using:

```
\section*
```

```
\section*{<title>}
```

```
\subsection
```

```
\subsection{<title>}
```

Sub-section titles are created using `\subsection`. Unnumbered sub-sections can be produced using:

```
\subsection*
```

```
\subsection*{<title>}
```

```
\subsubsection
```

```
\subsubsection{<title>}
```

Sub-sub-section titles are created using `\subsubsection`. Unnumbered sub-sub-sections can be produced using:

```
\subsubsection*
```

```
\subsubsection*{<title>}
```

Further sectioning levels can be obtained using `\paragraph` and `\ subparagraph`, but these are unnumbered with running heads.

```
\appendix
```

```
\appendix
```

Use `\appendix` to switch to the appendices. This changes `\section` to produce an appendix. Example:

```
\appendix  
\chapter{Proof of Theorems}
```

2.4 Citations and Bibliography

The `jmlr` class automatically loads `natbib` and sets the bibliography style to `plainnat`. References should be stored in a `.bib` file.

`\bibliography`

```
\bibliography{\<bib file\>}
```

This displays the bibliography.

`\citet`

```
\citet[\<pre note\>] [\<post note\>]{\<label\>}
```

Use `\citet` for a parenthetical citation.

`\citet`

```
\citet[\<note\>]{\<label\>}
```

Use `\citet` for a textual citation.

See the `natbib` documentation¹ for further details.

2.5 `jmlrutils` supplementary package

The `jmlrutils` package is automatically loaded by the `jmlr` class but may be used with other classes.

2.5.1 Package Options

The following options may be passed to the `jmlrutils` package if it is to be used without the `jmlr` class.

maths Define the commands `\set` and `\oldvec` and redefine `\vec`. This will also automatically load the `amsmath` package. (Default.)

nomaths Don't define `\set` and `\oldvec` and don't redefine `\vec`.

theorems Define the theorem commands and environments listed in Section 2.5.5. (Default.)

notheorems Don't define the theorem commands and environments.

cleveref Loads `aliascnt` and `cleveref` and defines the theorem environments with aliased counters. Note that this option is largely redundant with `notheorems`. When `jmlrutils` is loaded implicitly by `jmlr`, this option will also ensure that `hyperref` is loaded before `cleveref`. If `jmlrutils` is loaded without `jmlr` then `hyperref` won't be loaded unless `\jmlrprehyperref` is defined.

¹<http://ctan.org/pkg/natbib>

nocleverref Don't load aliascnt and cleveref (default).

subfloats Define the sub-figure and sub-table commands listed in Section 2.5.2. (Default.)

nosubfloats Don't define the sub-figure and sub-table commands.

The non-default options are provided when `jmlrutils` is loaded without the `jmlr` class. Don't try passing the non-default options to `jmlrutils` if you are using the `jmlr` class as this could interfere with the build process for the proceedings or book.

The `jmlrutils` package doesn't recognise any of the `jmlr` class options (such as `tablecaption`).

2.5.2 Figures and Tables

Floats, such as figures, tables and algorithms, are moving objects and are supposed to float to the nearest convenient location. Please don't force them to go in a particular place. In general it's best to use the `htbp` specifier and don't put the float in the middle of a paragraph (that is, make sure there's a paragraph break above and below the float). Floats are supposed to have a little extra space above and below them to make them stand out from the rest of the text. This extra space is put in automatically and shouldn't need modifying.

To ensure consistency, please **don't** try changing the format of the caption by doing something like:

```
\caption{\textit{A Sample Caption.}}
```

or

```
\caption{\em A Sample Caption.}
```

You can, of course, change the font for individual words or phrases. For example:

```
\caption{A Sample Caption With Some \emph{Emphasized Words}.}
```

The `jmlrutils` package provides the following command for displaying the contents of a figure or table:

```
\floatconts
```

```
\floatconts{\label}{\caption command}{\contents}
```

This ensures that the caption is correctly positioned and that the contents are centred. For example:

```
\begin{table}[htbp]
\floatconts
  {tab:example}% label
  {\caption{An Example Table}}% caption command
  {
    \begin{tabular}{ll}
      \bfseries Dataset & \bfseries Result\\
      Data1 & 0.123456
    \end{tabular}
  }
\end{table}
```

If the `jmlr` class is used, the table caption (when used with `\floatconts`) will obey the table-caption class option, otherwise it will be placed above the table contents. Within the figure environment, `\floatconts` will put the caption below the contents. This command may be used within other floats.

The `jmlr` class automatically loads `graphicx` which defines:

`includegraphics`

```
\includegraphics[<options>]{<file name>}
```

where `<options>` is a comma-separated list of options. If you are using `jmlrutils` with another class you need to load `graphicx` in order to use this command. See the documentation for the `graphicx` package for further details of this command and other provided commands.

For example, suppose you have an image called `mypic.png` in a subdirectory called `images`:

```
\begin{figure}[htbp]
\floatconts
  {fig:example}%
  {\caption{An Example Figure}}%
  {\includegraphics[width=0.5\textwidth]{images/mypic}}
\end{figure}
```

Note that you shouldn't specify the file extension when including the image when using the `jmlr` class. It's helpful if you can also provide a grayscale version of colour images. This should be labelled as the colour image but with `-gray` immediately before the extension. (The extension need not be the same as that of the colour image.) For example, if you have an image called `mypic.pdf`, the grayscale can be called `mypic-gray.pdf`, `mypic-gray.png` or `mypic-gray.jpg`. See Section 2.6 for further details.

`includeteximage`

```
\includeteximage[<options>]{<file name>}
```

If your image file is made up of `LATEX` code (e.g. `tikz` commands) the file can be included using `\includeteximage`. The optional argument is a key=value comma-separated list where the available keys are a subset of those provided by `graphicx`'s `\includegraphics`. The main keys are: `width`, `height`, `scale` and `angle`. Some of the keys specific to image files (such as the bounding box and type keys) do nothing with `\includeteximage`.

Sub-Figures and Sub-Tables

The `subfig` package causes a problem for `jmlrbook` so the `jmlr` class will give an error if it is used. Therefore the `jmlr` class provides its own commands for including sub-figures and sub-tables. If you aren't using the `jmlr` class, you can prevent `jmlrutils` from defining these commands with the `nosubfloats` package option.

Sub-float captions that are wider than the corresponding sub-float content are placed inside a `\parbox` set to the width of the sub-float content. This allows long captions to line

wrap in a mini-paragraph below the sub-float. However, if the sub-float is very narrow, this can lead to badly-broken sub-captions that generate overfull or underfull hbox warnings. You can specify a minimum width for sub-float captions by setting the following length:

```
rminsubcaptionwidth
```

```
\jmlrminsubcaptionwidth
```

The default value is 0pt. The value should be set with `\setlength`. The assignment can be localised by placing it within a group or environment.

```
\subfigure
```

```
\subfigure[<title>][<valign>]{<contents>}
```

This makes a sub-figure where `<contents>` denotes the contents of the sub-figure. This should also include the `\label`. The first optional argument `<title>` indicates a caption for the sub-figure. By default, the sub-figures are aligned at the base. This can be changed with the second optional argument `<valign>`, which may be one of: t (top), c (centred) or b (base).

For example, suppose there are two images files, `mypic1.png` and `mypic2.png`, in the sub-directory `images`. Then they can be included as sub-figures as follows:

```
\begin{figure}[htbp]
\floatconts
{fig:example2}% label for whole figure
{\caption{An Example Figure.}}% caption for whole figure
{%
\subfigure{%
\label{fig:pic1}}% label for this sub-figure
\includegraphics{images/mypic1}
}\quad % space out the images a bit
\subfigure{%
\label{fig:pic2}}% label for this sub-figure
\includegraphics{images/mypic2}
}
\end{figure}
```

```
\subtable
```

```
\subtable[<title>][<valign>]{<contents>}
```

This is an analogous command for sub-tables. The default value for `<valign>` is t.

2.5.3 Algorithms

The `jmlr` class automatically loads the `algorithm2e` package. If you are using `jmlrutils` with another class, you will need to load `algorithm2e` if you want to use the `algorithm` and `algorithm2e` environments described below.

```
algorithm
  \begin{algorithm}[(placement)]
  <contents>
  \end{algorithm}
```

Enumerated textual algorithms can be displayed using the algorithm environment. The optional argument is as for figure and table.

Within the body of the environment you can use the enumerate environment.

```
enumerate*
```

```
\begin{enumerate*}
\item <text>
...
\end{enumerate*}
```

If you want to have nested enumerate environments but you want to keep the same numbering throughout the algorithm, you can use the enumerate* environment, provided by the jmlrutils package. For example:

```
\begin{algorithm}
\floatconts{alg:path}{label}
{\caption{Shortest Path}}% caption
% contents
\begin{enumerate*}
\item Set the label of vertex  $s$  to 0
\item Set  $i=0$ 
\begin{enumerate*}
\item \label{step:locate}Locate all unlabelled vertices adjacent to a vertex labelled  $i$  and label them  $i+1$ 
\item If vertex  $t$  has been labelled,
\begin{enumerate*}
\item[] the shortest path can be found by backtracking, and the length is given by the label of  $t$ .
\end{enumerate*}
\end{enumerate*}
\item[otherwise]
\begin{enumerate*}
\item[] increment  $i$  and return to step\ref{step:locate}
\end{enumerate*}
\end{enumerate*}
\end{algorithm}
```

```
algorithm2e
```

```
\begin{algorithm2e}
<contents>
\end{algorithm2e}
```

Pseudo code can be displayed using the algorithm2e environment, provided by the algorithm2e package, which is automatically loaded. For example:

```
\begin{algorithm2e}
\caption{Computing Net Activation}
\label{alg:net}
\SetKwIn{$x_1$, \ldots, $x_n$, $w_1$, \ldots, $w_n$}{}
\SetKwOut{$y$, the net activation}
$y \leftarrow 0$;
\For{$i \leftarrow 1$ \KwTo $n$}{}{
    $y \leftarrow y + w_i * x_i$;
}
\end{algorithm2e}
```

See the algorithm2e documentation² for more details.

2.5.4 Description Lists

`altdescription`

```
\begin{altdescription}{\widestlabel}
\item[{\label}] {\itemtext}
\end{altdescription}
```

In addition to the standard description environment, the jmlr class also provides the altdescription environment. This has an argument that should be the widest label used in the list. For example:

```
\begin{altdescription}{differentiate}
\item[add] A method that adds two variables.
\item[differentiate] A method that differentiates a function.
\end{altdescription}
```

2.5.5 Theorems, Lemmas etc

The jmlrbook class doesn't work well with common theorem packages, so jmlrutils provides theorem code that won't conflict with jmlrbook. If you're using jmlrutils without the jmlr class, you can prevent the definition of these commands with the notheorems package option.

The jmlrutils package provides the following theorem-like environments: theorem, example, lemma, proposition, remark, corollary, definition, conjecture and axiom. Within the body of those environments, you can use the proof environment to display the proof if need be. The theorem-like environments all take an optional argument, which gives the environment a title. For example:

²<http://ctan.org/pkg/algorithme2>

```
\begin{theorem}[An Example Theorem]
\label{thm:example}
This is the theorem.
\begin{proof}
This is the proof.
\end{proof}
\end{theorem}
```

You can define your own numbered theorem-like environment using:

`\newtheorem`

```
\newtheorem{\name}{\counter}{\title}{\outercounter}
```

or you can define an unnumbered theorem-like environment using:

`\newtheorem*`

```
\newtheorem*{\name}{\title}
```

where `\name` is the name of the new environment and `\title` is the title tag at the start of the environment. In the case of the numbered theorems, `\counter` is a predefined counter to use with this theorem. If omitted, a new counter called `\name` will be defined. The final optional argument `\outercounter` is the name of a parent counter which, when incremented, should reset the theorem counter.

Both `\newtheorem` and `\newtheorem*` set the new theorem's style to the current defined style. The current style is set using the following commands:

`\theorembodyfont`

```
\theorembodyfont{\declarations}
```

This sets the font declarations used in the body of the theorem. This defaults to `\itshape`.

`\theoremheaderfont`

```
\theoremheaderfont{\declarations}
```

This sets the font declarations used for the theorem title. This defaults to `\bfseries`.

`\theorempostheader`

```
\theorempostheader{\text}
```

This indicates what should occur at the end of the title. This defaults to nothing.

`\theoremsep`

```
\theoremsep{\text}
```

This indicates what to put between the header and the body of the environment. This defaults to nothing.

For example, to define an unnumbered theorem-like environment called “note” with the title “Note” followed by a colon and a new line between the title and the body of the note environment:

```
\theorembodyfont{\upshape}
\theoremheaderfont{\scshape}
\theorempostheader{:}
\theoremsep{\newline}
\newtheorem*{note}{Note}
```

Now it can be used in the document environment:

```
\begin{note}
This is an numbered theorem-like environment.
\end{note}
```

2.5.6 Cross-Referencing

Always use `\label` when cross-referencing, rather than writing the number explicitly. The `jmlrutils` package provides some convenience commands to assist referencing. These commands, described below, can all take a comma-separated list of labels.

`\sectionref`

```
\sectionref{\label{label list}}
```

Used to refer to a section or sections. For example, if you defined a section as follows:

```
\chapter{Results}\label{sec:results}
```

you can refer to it as follows:

```
The results are detailed in \sectionref{sec:results}.
```

This command may also be used for sub-sections and sub-sub-sections.

`\appendixref`

```
\appendixref{\label{label list}}
```

Used to refer to an appendix or multiple appendices.

`\equationref`

```
\equationref{\label{label list}}
```

Used to refer to an equation or multiple equations.

`\tableref`

```
\tableref{\label{label list}}
```

Used to refer to a table or multiple tables. This can also be used for sub-tables where the main table number is also required.

\subtabref

```
\subtabref{\label list}
```

Used to refer to sub-tables without the main table number, e.g. (a) or (b).

\figureref

```
\figureref{\label list}
```

Used to refer to a figure or multiple figures. This can also be used for sub-figures where the main figure number is also required, e.g. 2(a) or 4(b).

\subfigref

```
\subfigref{\label list}
```

Used to refer to sub-figures without the main figure number, e.g. (a) or (b).

\algorithmref

```
\algorithmref{\label list}
```

Used to refer to an algorithm or multiple algorithms.

\theoremref

```
\theoremref{\label list}
```

Used to refer to a theorem or multiple theorems.

\lemmaref

```
\lemmaref{\label list}
```

Used to refer to a lemma or multiple lemmas.

\remarkref

```
\remarkref{\label list}
```

Used to refer to a remark or multiple remarks.

\corollaryref

```
\corollaryref{\label list}
```

Used to refer to a corollary or multiple corollaries.

\definitionref

```
\definitionref{\label list}
```

Used to refer to a definition or multiple definitions.

\conjectureref

```
\conjectureref{\label list}
```

Used to refer to a conjecture or multiple conjectures.

\axiomref

```
\axiomref{\{label list\}}
```

Used to refer to an axiom or multiple axioms.

\examplerref

```
\examplerref{\{label list\}}
```

Used to refer to an example or multiple examples.

2.5.7 Mathematics

The `jmlr` class loads the `amsmath` package so you can use any of the commands and environments defined in that package. The `jmlrutils` package will load `amsmath` if the `defaultmaths` option is used but won't load `amsmath` if the `nomaths` option is used. A brief summary of some of the more common commands and environments is provided here. See the `amsmath` documentation³ for further details.

\set

```
\set{\maths}
```

In addition to the commands provided by `amsmath`, the `jmlrutils` package also provides the `\set` command which can be used to typeset a set. For example:

The universal set is denoted `\set{U}`

This command won't be provided if the `nomaths` option is used.

\vec

```
\vec{\maths}
```

The `\vec` command is redefined by `jmlrutils` to use `\boldsymbol`, which is provided by `amsmath`. (This command won't be redefined if the `nomaths` option is used.) If you require the original `\vec`, you can access it with:

\orgvec

```
\orgvec{\maths}
```

This command won't be provided if the `nomaths` option is used.

Unnumbered single-line equations should be displayed using `\[` and `\]`. For example:

`\[E = m c^2\]`

³<http://ctan.org/pkg/amsmath>

Numbered single-line equations should be displayed using the equation environment. For example:

```
\begin{equation}\label{eq:trigrule}\\cos^2\theta + \sin^2\theta \equiv 1\\end{equation}
```

The above are provided by the L^AT_EX kernel but may be adjusted by packages such as amsmath. The commands and environments below are provided by amsmath.

Multi-lined numbered equations should be displayed using the align environment. For example:

```
\begin{align}f(x) &= x^2 + x\label{eq:f}\\f'(x) &= 2x + 1\label{eq:df}\\end{align}
```

Unnumbered multi-lined equations should be displayed using the align* environment. For example:

```
\begin{align*}f(x) &= (x+1)(x-1)\\\\&= x^2 - 1\\end{align*}
```

If you want to mix numbered with unnumbered lines use the align environment and suppress unwanted line numbers with \nonumber. For example:

```
\begin{align}y &= x^2 + 3x - 2x + 1\nonumber\\\\&= x^2 + x + 1\label{eq:y}\\end{align}
```

An equation that is too long to fit on a single line can be displayed using the split environment.

Text can be embedded in an equation using \text{<text>} or you can use \intertext{<text>} to interrupt a multi-line environment such as align.

Predefined operator names are listed in [table 2.1](#). For additional operators, either use

```
\operatorname{operatorname}
```

```
\operatorname{operatorname}{<name>}
```

for example

```
If $X$ and $Y$ are independent,\\operatorname{var}(X+Y) =\\operatorname{var}(X) + \\operatorname{var}(Y)$
```

or declare it with

```
\clareoperator
```

```
\DeclareMathOperator{<command>}{<name>}
```

for example

```
\DeclareMathOperator{\var}{var}
```

and then use this new command:

```
If $X$ and $Y$ are independent,  
$\var(X+Y) = \var(X)+\var(Y)$
```

If you want limits that go above and below the operator (like \sum) use the starred versions ($\operatorname{operatorname}^*$ or \DeclareMathOperator^*).

Table 2.1: Predefined Operator Names (taken from amsmath documentation)

<code>\arccos</code>	<code>arccos</code>	<code>\deg</code>	<code>deg</code>	<code>\lg</code>	<code>lg</code>	<code>\projlim</code>	<code>projlim</code>
<code>\arcsin</code>	<code>arcsin</code>	<code>\det</code>	<code>det</code>	<code>\lim</code>	<code>lim</code>	<code>\sec</code>	<code>sec</code>
<code>\arctan</code>	<code>arctan</code>	<code>\dim</code>	<code>dim</code>	<code>\liminf</code>	<code>liminf</code>	<code>\sin</code>	<code>sin</code>
<code>\arg</code>	<code>arg</code>	<code>\exp</code>	<code>exp</code>	<code>\limsup</code>	<code>limsup</code>	<code>\sinh</code>	<code>sinh</code>
<code>\cos</code>	<code>cos</code>	<code>\gcd</code>	<code>gcd</code>	<code>\ln</code>	<code>ln</code>	<code>\sup</code>	<code>sup</code>
<code>\cosh</code>	<code>cosh</code>	<code>\hom</code>	<code>hom</code>	<code>\log</code>	<code>log</code>	<code>\tan</code>	<code>tan</code>

		<code>\varliminf</code>	$\underline{\lim}$	<code>\varprojlim</code>	\varprojlim	\varinjlim	\varinjlim

2.6 Color vs Grayscale

If the proceedings are to be incorporated into a black and white printed book, it can be helpful if authors supply grayscale versions of their image files. This section can be ignored if your article will only be available online.

With external PDF, PNG or JPG graphic files, the grayscale version should be named with `-gray` added to the basename (before the image file extension).

For example, if the file is called `myimage.png`, then the gray version should be `myimage-gray.png` or `myimage-gray.pdf` or `myimage-gray.jpg`. You don't need to modify your code. The `jmlr` class checks for the existence of the grayscale version if it is print mode (provided you have used `\includegraphics` and haven't specified the file extension). This check is performed by code provided by the `jmlr` class not the `jmlrutils` package.

```
\ifprint
```

```
\ifprint{\(true part)}{\(false part)}
```

You can use `\ifprint` to determine which mode you are in. For example:

```
in \figureref{fig:nodes}, the
\ifprint{dark gray}{purple}
ellipse represents an input and the
\ifprint{light gray}{yellow} ellipse
represents an output.
```

Another example:

```
{\ifprint{\bfseries}{\color{red}}important text!}
```

You can use the class option gray to see how the document will appear in gray scale mode.

The xcolor class is loaded with the x11names option, so you can use any of the x11 predefined colors (listed in the xcolor documentation⁴).

2.7 Where To Go For Help

If you have a general L^AT_EX query, the first place to go to is the T_EX FAQ⁵.

If you are unfamiliar or just getting started with L^AT_EX, there's a list of on-line introductions to L^AT_EX at <https://texfaq.org/FAQ-man-latex> or have a look at L^AT_EX for Complete Novices.

There are also forums, mailing lists and newsgroups. For example, T_EX on StackExchange (<https://tex.stackexchange.com/>), the L^AT_EX Community (<https://latex.org/forum/>), the texhax mailing list (<http://tug.org/mailman/listinfo/texhax>) and comp.text.tex (archives available at <http://groups.google.com/group/comp.text.tex/>).

Documentation for packages or classes can be found using the texdoc application. For example:

```
texdoc natbib
```

Alternatively, you can go to <http://www.ctan.org/pkg/\langle name\rangle> where $\langle name \rangle$ is the name of the package. For example: <http://www.ctan.org/pkg/natbib>

For a general guide to preparing papers (regardless of whether you are using L^AT_EX or a word processor), see Kate L. Turabian, "A manual for writers of term papers, theses, and dissertations", The University of Chicago Press, 1996.

⁴<http://ctan.org/pkg/xcolor>

⁵<https://texfaq.org/>

3 Guidelines for Production Editors

The `jmlrbook` class is now obsolete as it has stopped working following changes to the L^AT_EX kernel in 2020. The class is described here for archival purposes.

To prepare articles for PMLR, you will need to manually set the first page number using:

```
\firstpageno
```

```
\firstpageno{\(n\)}
```

Please follow the [PMLR specifications](#).

3.1 `jmlrbook` Class Options

nowcp The imported pre-published articles were published in the Journal of Machine Learning Research (default).

pmlr The imported pre-published articles were published in the Proceedings of Machine Learning Research (PMLR).

wcp The imported pre-published articles were published in the JMLR Workshop and Conference Proceedings (JMLR W&CP).

If the book has a mixture of JMLR, JMLR W&CP or PMLR articles, you can switch between them using

```
\jmlrnwcp
```

```
\jmlrnwcp
```

(for JMLR) or

```
\jmlrwcp
```

```
\jmlrwcp
```

(for JMLR W&CP) or

```
\jmlrpmlr
```

```
\jmlrpmlr
```

(for PMLR). Alternatively, you can set the name of the journal or conference proceedings using:

```
jmlrproceedings
```

```
\jmlrproceedings{\short{title}}{\long{title}}
```

color Color version (see Section 2.6). Use this option for the on-line version with hyperlinks enabled (default).

gray Grayscale version (see Section 2.6). Use this option for the print version without hyperlinks.

tablecaption=top in a table environment, \floatconts puts the caption at the top.

tablecaption=bottom in a table environment, \floatconts puts the caption at the bottom.

letterpaper Set the paper size to letter (default).

7x10 Set the paper size to 7×10 inches.

10pt Use 10pt as the normal text size.

11pt Use 11pt as the normal text size (default).

12pt Use 12pt as the normal text size.

3.2 The Preamble

Any packages that the imported articles load (which aren't automatically loaded by jmlr) must be loaded in the book's preamble. For example, if one or more of the articles load the siunitx package, this package must be loaded in the book.

Commands that are defined in the imported articles will be local to that article unless they have been globally defined using \gdef or \global. Since most authors use \newcommand and \newenvironment (or \renewcommand and \renewenvironment) this shouldn't cause a conflict if more than one article has defined the same command or environment. For example, in the sample files supplied, both paper1/paper1.tex and paper2/paper2.tex have defined the command \samplecommand using \newcommand. As long as this command isn't also defined in the book, there won't be a conflict.

```
\title
```

```
\title[\PDF{title}]{\book{title}}
```

In the book preamble, \title sets the book title and the optional argument is used for the PDF title, which will be displayed when the reader views the PDF file's properties in their PDF

viewer. (Note that in the imported articles, `\title` sets the article's title and the optional argument sets the short title for the page header and table of contents.)

`\author`

```
\author[<PDF author(s)>]{<book author(s)>}
```

In the book preamble, `\author` sets the book's author (or editor) and the optional argument is used for the PDF author, which will be displayed when the reader views the PDF file's properties in their PDF viewer. (Note that in the imported articles, `\author` sets the article's author and the optional argument sets the short author list for the page header.)

`\volume`

```
\volume{<number>}
```

This command sets the book's volume number. Omit if the book has no volume number.

`\subtitle`

```
\subtitle{<sub-title>}
```

This command sets the book's subtitle. Omit if the book has no sub-title.

`\logo`

```
\logo[<url>]{<image command>}
```

This sets the book's title image. Use `\includegraphics` and omit the file extension. If you provide a grayscale version as well as a color version, the grayscale version will be used for the print version of the book. (See Section 2.6 for further details.) The optional argument, if present, was formerly used by `makejmlrbookgui` to make the logo a link to `<url>` on the index HTML page. (The HTML pages are no longer generated by the application as PMLR now generate the HTML from the .bib file for the proceedings.)

`\team`

```
\team{<team title>}
```

This can be used to set the name of the editorial team. This command may be omitted if not required.

`\productioneditor`

```
\productioneditor{<name>}
```

This command may be used to name the production editor. The command may be omitted if not required.

`\jmlrlocation`

```
\jmlrlocation{<location>}
```

This specifies the workshop location. By default this doesn't appear on the title page. See Section 3.4 for details on how to modify the layout of the title page.

3.3 Main Book Commands

All commands that are provided by the `jmlr` class are also available with the `jmlrbook` class, but some commands might behave differently depending on whether they are in the main part of the book or within the imported articles.

In the main part of the book you can use the following commands:

`\maketitle`

```
\maketitle
```

This displays the book's title page. Note that `\maketitle` has a different effect when used in imported articles.

`\frontmatter`

```
\frontmatter
```

Use this command at the start of the front matter (e.g. before the foreword or preface). This will make chapters unnumbered even if you use `\chapter` instead of `\chapter*`. It also sets the page style and sets the page numbering to lower case Roman numerals.

`\authorsignoff`

```
\begin{authorsignoff}  
  <author list>  
\end{authorsignoff}
```

This environment may be used by the author signing off at the end of a chapter such as the foreword. Within the environment use:

`\Author`

```
\Author{<details>}
```

for the author's details. More than one `\Author` should be used if there is more than one author. Example:

```
\begin{authorsignoff}  
  \Author{Nicola Talbot}\\  
  University of East Anglia}  
  \Author{Anne Author}\\  
  University of No Where}  
\end{authorsignoff}
```

`\preface`

```
\begin{preface}[(<filename>)]
```

This environment may be used to typeset the preface. This starts a new chapter using

```
\chapter{\prefacename}
```

\prefacename where \prefacename defaults to “Preface”. This environment should typically go in the front matter and is provided to allow makejmlrbookgui create a standalone document for the preface. The optional argument is the filename (without any extension or path) that will be used by makejmlrbookgui. This defaults to preface but, to conform with PMLR guidelines, should be changed to the surname of the first author (editor) followed by the final two digits of the year. See the PMLR website for further details of the guidelines.

signoff

```
\begin{signoff}[\langle team name \rangle]{\langle date \rangle}  
  \langle editor list \rangle  
\end{signoff}
```

This environment may be used by the editorial team when signing off a chapter such as the preface. If the optional argument is omitted, “The Editorial Team” is used. If you are using the preface environment described above, the signoff environment must go inside the preface environment.

Within the signoff environment use:

\Editor

```
\Editor{\langle details \rangle}
```

for each editor. Example:

```
\begin{signoff}{March 2010}  
% First editor:  
\Editor{Nicola Talbot}\\  
University of East Anglia\\  
\mailto{N.Talbot@uea.ac.uk}}  
% Second editor:  
\Editor{Anne Editor}\\  
University of Nowhere\\  
\mailto{ae@example.com}}  
\end{signoff}
```

tableofcontents

```
\tableofcontents
```

This command displays the book’s table of contents. Note that it has a different effect if used in an imported article.

\mainmatter

```
\mainmatter
```

Use this command to switch to the book’s main matter. This will switch the chapter numbering back on, reset the page numbering to Arabic and set up the main page style.

\part

```
\part[<short title>]{<title>}
```

If used in the main part of the book, this command will start a new part and issue a clear double page. Note that this command has a different effect if used in an imported article (or inside the jmlrpapers environment).

\addtocpart

```
\addtocpart{<title>}
```

This adds *<title>* to the table of contents, issues a clear double page, but doesn't display any text or affect the part numbering.

\chapter

```
\chapter[<short title>]{<title>}
```

This command may be used in the main body of the book but will cause an error if used within an imported article (or inside the jmlrpapers environment).

\section

```
\section[<short title>]{<title>}
```

\subsection

```
\subsection[<short title>]{<title>}
```

\subsubsection

```
\subsubsection[<short title>]{<title>}
```

\paragraph

```
\paragraph[<short title>]{<title>}
```

\ subparagraph

```
\subparagraph[<short title>]{<title>}
```

These commands may be used in the main body of the book or within imported articles. In the main body of the book (outside of the jmlrpapers environment) they need to be within a chapter and will be numbered according to the chapter.

\appendix

```
\appendix
```

If used in the main body of the book (*outside* of the jmlrpapers environment) this will switch to the book appendices. Subsequent \chapter commands will produce the appendices.

(Any imported articles in the appendix will be identified by `makejmlrbookgui` as supplemental material.) If used within an imported article (or within the `jmlrpapers` environment) `\appendix` will switch to the article appendices and won't affect the main part of the book.

`jmlrpapers`

```
\begin{jmlrpapers}
<imported papers>
\end{jmlrpapers}
```

This environment must be used when importing articles and may be used as often as required. Take care not to include book sectioning commands, such as `\chapter`, in this environment. Within the `jmlrpapers` environment, use the following commands to import articles:

`\importpubpaper`

```
\importpubpaper[<label>]{<directory>}{<file>}{<pages>}
```

This imports an article that has already been published elsewhere. The `<pages>` argument should be the page range from the *previously published* version of this article. This may not necessarily be the same as the page range of the article in the book. The directory the imported file is contained in is given by `<directory>`. If the file is in the same directory as the book, use a dot. The file name is given by `<file>`. The article is also given a label, specified by the optional argument. This is `<directory>/<file>` by default. The label is used as a prefix to labels in the imported articles which ensures that cross-references are unique. You can also use this label to reference the article elsewhere in the book (see Section 3.3.2).

`\importpaper`

```
\importpaper[<label>]{<directory>}{<file>}
```

Imports an article that is being published in the book. The arguments are the same as above except that there is no page range (the page range is computed automatically).

`\importarticle`

```
\importarticle[<label>]{<directory>}{<file>}
```

This imports an article that hasn't been published elsewhere. There is no page range, but the other arguments are the same as those described above for `\importpubpaper`.

Example: to import a previously published paper `paper1/paper1.tex` and an unpublished paper `paper2/paper2.tex`:

```
\begin{jmlrpapers}
\importpubpaper{paper1}{paper1}{23--45}
\importarticle{paper2}{paper2}
\end{jmlrpapers}
```

3.3.1 Two Column Articles in a One Column Book

The `jmlrbook` class column style will override the column style of the imported articles. You can use the `twocolumn` class option to `jmlrbook`, but this will make the whole book with two columns. If you only want the imported articles to be in two columns, then put `\twocolumn` in the `jmlrpapers` environment to switch on two column formatting. The effect will be localised to the end of the environment.

3.3.2 Cross-Referencing

You can cross-reference other parts of the book using the standard `\label`/`\ref` mechanism, but if you want to reference something within an imported article, you must prefix the label with the label given when importing the article (that is, the optional argument to `\importpubpaper`, `\importpaper` or `\importarticle`). For example, if you want to reference a section labelled `sec:results` in the imported paper `paper1/paper1.tex`, you would need to do:

```
see Section~\ref{paper1/paper1sec:results}
```

or

```
see \sectionref{paper1/paper1sec:results}
```

In addition to the commands described in Section 2.5.6, the `jmlrbook` class also provides the following cross-referencing commands:

```
\chapterref
```

```
\chapterref{\{label list\}}
```

Reference a chapter or chapters. The argument is a comma-separated list of labels.

```
\articlepageref
```

```
\articlepageref{\{label\}}
```

This displays the starting page number of the article whose label is given by `\{label\}`. Note that this must a single label, not a list. For example:

```
An interesting article starts on page~\articlepageref{paper1/paper1}
```

```
\articlepagesref
```

```
\articlepagesref{\{label\}}
```

This displays the page range of the article whose label is given by `\{label\}`. Again, this must be a single label, not a list. This page range is unrelated to the `\{pages\}` argument of `\importpubarticle`.

```
\articletitleref
```

```
\articletitleref{\{label\}}
```

This displays the short title for the article whose label is given by `<label>`. Again, this must be a single label, not a list.

`\articleauthorref`

```
\articleauthorref{<label>}
```

This displays the author list for the article whose label is given by `<label>`. Again, this must be a single label, not a list.

3.4 Altering the Layout of the Main Title Page

`\titlebody`

```
\titlebody
```

The main body of the book's title page is given by the command `\titlebody`. Within the definition of this command, you can use:

`\SetTitleElement`

```
\SetTitleElement{<element>}{<pre>}{<post>}
```

where `<element>` can be: `title`, `volume`, `issue1`, `subtitle`, `logo`, `team`, `author`, `date`, `productioneditor`. The `<pre>` and `<post>` arguments specify what to do before and after the element. Note that `\SetTitleElement` does nothing if that element hasn't been set. For example, if `\volume` has been omitted or `\volume{}` is used, then

```
\SetTitleElement{volume}{\mainvolumefont}{\postmainvolume}
```

will do nothing (so you don't end up with **Volume :**).

`\IfTitleElement`

```
\IfTitleElement{<element>}{<true part>}{<false part>}
```

This does `<true part>` if `<element>` has been set otherwise it does `<false part>`. For example, `\postmainvolume` is defined as:

```
\newcommand{\postmainvolume}{%
  \IfTitleElement{subtitle}{}{:}\par\relax
}
```

This means that it will only print a colon after the volume number if the subtitle has been set.

The default definition of `\titlebody` is:

```
\newcommand{\titlebody}{%
  \SetTitleElement{title}{\maintitlefont}{\postmaintitle}%
  \SetTitleElement{volume}{\mainvolumefont}{\postmainvolume}%
}
```

¹The default title page layout doesn't use `issue`, but if required it can be set with `\issue{<number>}`

```

\SetTitleElement{subtitle}{\mainsubtitlefont}{\postmainsubtitle}%
\SetTitleElement{logo}{\mainlogofont}{\postmainlogo}%
\SetTitleElement{team}{\mainteamfont}{\postmainteam}%
\SetTitleElement{author}{\mainauthorfont}{\postmainauthor}%
\SetTitleElement{productioneditor}{\mainproductioneditorfont}%
{\postmainproductioneditor}%
}

```

3.5 Potential Pitfalls

The `combine` class and `hyperref` package are individually both easily broken by packages that change certain internals and they don't ordinarily work together. The `jmlrbook` class applies patches to the internal referencing mechanism to make them work together, but it's a fairly fragile alliance. Some packages are known to break it, for example `subfig`, `pdfpages` and `geometry`. This is why the `jmlr` class checks for known problem packages and generates an error message to dissuade authors from using them. It's likely that there are other packages that may cause a problem and, as they are found, they will be added to the check list. Also, it's possible for an author to disable the package checking mechanism if they are determined to use a particular package.

In the event that an article has loaded a problem package, the editors will have to decide whether to ask the author to change the article so that it doesn't cause a problem or to make the changes themselves or to find a way of fudging things to get it to work. It depends on the level of `LATEX` expertise amongst the editors and the time available.

Another problem that can arise is when different articles use packages that conflict. For example, one article uses package `foo` and another uses package `bar`. Each article compiles okay as a stand-alone article, but when combined `foo` and `bar` conflict. Another problem may occur when articles load the same package but with conflicting package options. To reduce the chance of this occurring, the `jmlr` class loads some commonly used packages. For example, it loads the `algorithm2e` package with the `algo2e` and `ruled` options and provides the `algorithm` environment in addition to `algorithm2e`'s `algorithm2e` environment. Different versions of the same package can also be a problem. To help counteract the problem caused by different papers using different versions of the `algorithm2e` package, `jmlrbook` defines most of the old style commands if they don't exist.

Articles that use different input encodings can also cause a problem. For example, if one article uses `utf8` and another uses `latin1`. If the authors have directly entered a diacritic or ligature, such as `é` or `æ`, instead of using a `LATEX` command, such as `\'e` or `\ae`, then this will cause an error on compiling the book.² The choice then is to either change all non-keyboard characters with the appropriate `LATEX` commands or to use the `\inputencoding` command, supplied by the `inputenc` package, to switch the encoding at the start of each article. One thing to watch out for are `bib` files that contain a mixture of encodings caused by copying and pasting from different sources. Version 0.4.2b of `makejmlrbookgui` provides a function to search for characters outside the range `0x20` (space) and `0x7E` (tilde).

²and may also cause a problem for the editor's text editor.

Authors who use \nonumber within an equation environment can mess up the hyperlinks. Remove \nonumber and change the equation environment to \[... \] (or just make it a numbered equation).

If the article changes the graphics path using \graphicspath, jmlrbook won't find the graphics if the imported articles aren't in the same directory as the book.

4 The Code

4.1 jmlrutils.sty Code

Non-class dependent code. This package is automatically loaded by jmlr but may be used with other classes.

```
1 \ProvidesPackage{jmlrutils}[2022/02/09 v1.30 (NLCT)]
```

Package options:

`fjmlrutilsmaths` Determine if the maths commands should be provided.

```
2 \newif\ifjmlrutilsmaths  
3 \jmlrutilsmathstrue
```

```
4 \DeclareOption{maths}{\jmlrutilsmathstrue}  
5 \DeclareOption{nomaths}{\jmlrutilsmathsfalse}
```

Provide US synonyms

```
6 \DeclareOption{math}{\jmlrutilsmathstrue}  
7 \DeclareOption{nomath}{\jmlrutilsmathsfalse}
```

`lrutilstheorems` Determine if the theorem environments should be provided.

```
8 \newif\ifjmlrutilstheorems  
9 \jmlrutilstheoremstrue
```

```
10 \DeclareOption{theorems}{\jmlrutilstheoremstrue}  
11 \DeclareOption{notheorems}{\jmlrutilstheoremsfalse}
```

`\ifjmlrclevereref` Determine whether or not to load cleveref.

```
12 \newif\ifjmlrclevereref  
13 \jmlrclevereffalse  
  
14 \DeclareOption{cleveref}{\jmlrcleverereftrue}

```

```
420 \newcommand*{\orempostheader}[1]{%
421   \renewcommand*{\@orempostheader}{#1}%
422 }
423 \newcommand*{\@orempostheader}{}%
```

```
\newtheorem
```

```
424 \let\jmlr@org@newtheorem\newtheorem
425 \renewcommand*{\newtheorem}{\ifstar\jmlr@snewtheorem\jmlr@newtheorem}
```

Define starred version:

```
\newtheorem*{\env-name}{{title tag}}
```

```
426 \newcommand*{\jmlr@snewtheorem}[2]{%
427   \cslet{jmlr@thm@#1@body@font}{\@theorembodyfont}%
428   \cslet{jmlr@thm@#1@header@font}{\@theoremheaderfont}%
429   \cslet{jmlr@thm@#1@sep}{\@theoremsep}%
430   \cslet{jmlr@thm@#1@postheader}{\@orempostheader}%
431   \newenvironment{#1}%
432   {%
433     \trivlist
434       \item
435       [%
436         \hspace{\labelsep}\csuse{jmlr@thm@#1@header@font}#2%
437         \csuse{jmlr@thm@#1@postheader}%
438       ]%
439     ]%
440     \mbox{}\csuse{jmlr@thm@#1@sep}%
441     \csuse{jmlr@thm@#1@body@font}%
442   }%
443   {%

4.2 jmlr.cls Code

This class is based on the jmlr2e package but was modified to make sure it works with jmlr-book which uses both combine and hyperref.

Declare class and required TeX format:

```
568 \NeedsTeXFormat{LaTeX2e}
569 \ProvidesClass{jmlr}[2022/02/09 v1.30 (NLCT) Journal of Machine Learning Research]
```

Need xkeyval package to have key=value class options

```
570 \RequirePackage{xkeyval}
```

```
571 \RequirePackage{calc}
```

```
572 \RequirePackage{etoolbox}
```

Some packages need to be loaded before hyperref so provide a hook to do this:

jmlrprehyperref

```
573 \providecommand*\jmlrprehyperref{}{}
```

The following conditionals are provided to make this class play nicely with combine and aren't required for articles.

```
574 \newif\if@openright
```

```
575 \newif\if@mainmatter \o@mainmattertrue
```

\ifgrayscale Determine whether to select grayscale alternatives

```
576 \o@ifundefined{ifgrayscale}{
```

```
577   \newif\ifgrayscale
```

```
578   \grayscalefalse
```

```
579 }{}
```

```
580 \DeclareOptionX{color}{\grayscalefalse}
```

```
581   \PassOptionsToPackage{color}{xcolor}
```

```
582 \DeclareOptionX{gray}{\grayscaletrue}
```

```
583   \PassOptionsToPackage{gray}{xcolor}
```

draft

```
584 \DeclareOptionX{draft}{\PassOptionsToClass{\CurrentOption}{article}}
```

final

```
585 \DeclareOptionX{final}{\PassOptionsToClass{\CurrentOption}{article}}
```

Can't load jmlrutils here but need the \iftablecaptiontop conditional for the class options.

tablecaptiontop

```
586 \newif\iftablecaptiontop
```

```
587 \tablecaptiontoptrue
```

Provide table contents command that uses this conditional. (The `jmlrutils` package doesn't use it.)

```
\tableconts
588 \newcommand{\tableconts}[3]{%
589   \iftablecaptiontop
590     #2\label{#1}\vskip\baselineskip
591     {\centering #3\par}%
592   \else
593     {\centering #3\par}%
594     \vskip\baselineskip
595     #2\label{#1}%
596   \fi
597 }
```

Determine if the table captions should go at the top.

```
tablecaptiontop
598 \DeclareOptionX{tablecaptiontop}{\tablecaptiontoptrue}
```

```
tablecaptiontop
599 \DeclareOptionX{tablecaptionbottom}{\tablecaptiontopfalse}
```

`tablecaption` Key=value interface.

```
600 \define@choicekey{jmlr.cls}{tablecaption}[\val\nr]{top,bottom}{%
601   \ifcase\nr\relax
602     \tablecaptiontoptrue
603   \or
604     \tablecaptiontopfalse
605   \fi
606 }
```

`\ifjmlrhtml` Determine if we are using TeX4ht. (Deprecated.) This option should no longer be used. The PMLR have changed the submission guidelines and the production editor should no longer supply HTML files.

```
607 \newif\ifjmlrhtml
608 \jmlrhtmlfalse
609 \DeclareOptionX{html}{%
610   \ClassWarning{jmlr}{html option is now deprecated}%
611   \jmlrhtmltrue}
612 \DeclareOptionX{nohtml}{\jmlrhtmlfalse}
```

Normal font size (default is 11pt).

```
613 \def\pt@size{11pt}
614 \DeclareOptionX{10pt}{\renewcommand{\pt@size}{10pt}}
615 \DeclareOptionX{11pt}{\renewcommand{\pt@size}{11pt}}
616 \DeclareOptionX{12pt}{\renewcommand{\pt@size}{12pt}}
```

```

jmlrproceedings The name of the proceedings.
617 \newcommand*{\@jmlrproceedings}{Journal of Machine Learning Research}

bbrvproceedings The abbreviated name of the proceedings.
618 \newcommand*{\@jmlrabbrvproceedings}{JMLR}

jmlrproceedings Sets the title and abbreviation of the proceedings
619 \newcommand*{\jmlrproceedings}[2]{%
620   \renewcommand*{\@jmlrabbrvproceedings}{#1}%
621   \renewcommand*{\@jmlrproceedings}{#2}%
622 }

\jmlrnowcp
623 \newcommand*{\jmlrnowcp}{%
624   \jmlrproceedings{JMLR}{Journal of Machine Learning Research}%
625 }

\jmlrwcp
626 \newcommand*{\jmlrwcp}{%
627   \jmlrproceedings{JMLR W\&CP}{JMLR: Workshop and Conference Proceedings}%
628 }

\jmlrpmlr The JMLR W&CP has been renamed PMLR, so provide code to switch to this instead,
629 \newcommand*{\jmlrpmlr}{%
630   \jmlrproceedings{PMLR}{Proceedings of Machine Learning Research}%
631 }

This is a journal (non JMLR W&CP/PMLR) article:
632 \DeclareOptionX{nowcp}{\jmlrnowcp}

This is an article for JMLR W&CP
633 \DeclareOptionX{wcp}{\jmlrwcp}

This is an article for PMLR
634 \DeclareOptionX{pmlr}{\jmlrpmlr}

Pass cleveref option to jmlrutils
635 \DeclareOptionX{cleveref}{\PassOptionsToPackage{cleveref}{jmlrutils}}

oneside
636 \DeclareOptionX{oneside}{\@twosidefalse \mparswitchfalse}

twoside
637 \DeclareOptionX{twoside}{\@twosidetrue \mparswitchtrue}

Set two-sided format
638 \@twosidetrue

```

The default paper size is letter, but provide 7×10 in alternative:

```
639 \newif\ifviiXx  
640 \viiXxfalse  
641 \DeclareOptionX{7x10}{\viiXxtrue}  
642 \DeclareOptionX{letterpaper}{\PassOptionsToPackage{letterpaper}{typearea}}
```

Pass all remaining options to article class:

```
643 \DeclareOptionX*{\PassOptionsToClass{\CurrentOption}{article}}
```

Execute required options:

```
644 \ExecuteOptions{letterpaper}
```

Process options:

```
645 \ProcessOptionsX
```

If two-sided, pass that to article as well:

```
646 \if@twoside  
647 \PassOptionsToClass{twoside}{article}  
648 \fi
```

Load article class.

```
649 \LoadClass[\pt@size]{article}
```

Can't use geometry package because it doesn't play nicely with the combine class.

```
650 \ifviiXx  
651 \setlength{\paperwidth}{7in}  
652 \setlength{\paperheight}{10in}  
653 \setlength{\textwidth}{5.25in}  
654 \setlength{\textheight}{8.2in}  
655 \setlength{\topmargin}{0.4in}  
656 \setlength{\headheight}{0.2in}  
657 \setlength{\headsep}{0.2in}  
658 \setlength{\hoffset}{-1in}  
659 \setlength{\voffset}{-1in}  
660 \setlength{\evensidemargin}{0.75in}  
661 \setlength{\oddsidemargin}{1.0in}  
662 \else  
663 \setlength{\oddsidemargin}{0.25in}  
664 \setlength{\evensidemargin}{0.25in}  
665 \setlength{\marginparwidth}{0.07 true in}  
666 \setlength{\topmargin}{-0.5in}  
667 \addtolength{\headsep}{0.25in}  
668 \setlength{\textheight}{8.5 true in}  
669 \setlength{\textwidth}{6.0 true in}  
670 \fi
```

Need to add jmlr end document hook before natbib adds a \clearpage to it.

```
671 \AtEndDocument{@jmlrenddoc}
```

Need placeins to add float barrier at the end of the article.

```
672 \RequirePackage{placeins}
```

Required packages:

```
673 \RequirePackage{amsmath}  
674 \RequirePackage{amssymb}  
675 \RequirePackage{natbib}  
676 \RequirePackage{graphicx}  
677 \RequirePackage{url}  
678 \PassOptionsToPackage{x11names}{xcolor}  
679 \RequirePackage{xcolor}
```

Allow old command names in the event that the proceedings contains a mixture of papers that use old and new versions. (This means that editors need to install the newer version.) For some reason, loading algorithm2e causes the message

```
(\end occurred inside a group at level 1)
```

I don't know why, but it's outside the control of this class.

```
680 \PassOptionsToPackage{algo2e,ruled}{algorithm2e}  
681 \RequirePackage{algorithm2e}
```

Set the algorithm margin to zero.

```
682 \setlength{\algomargin}{0pt}
```

Load jmlrutils before hyperref.

```
683 \RequirePackage{jmlrutils}
```

Do all the stuff that needs to be done before hyperref is loaded:

```
684 \jmlrprehyperref
```

Do stuff that has to come immediately before hyperref is loaded:

```
685 \@ifundefined{@pre@hyperref}{}{\@pre@hyperref}
```

Load hyperref:

```
686 \RequirePackage{hyperref}  
687 \RequirePackage{nameref}
```

```
688 % Do stuff that has to come immediately after \sty{hyperref} and  
689 % \sty{nameref} are loaded:
```

```
690 %\changes{1.16}{2012/05/15}{added \cs{@post@hyperref}}
```

```
691 \@ifundefined{@post@hyperref}{}{\@post@hyperref}
```

Set up hyperref options:

```
692 \hypersetup{colorlinks,  
693             linkcolor=blue,  
694             citecolor=blue,  
695             urlcolor=magenta,  
696             linktocpage,  
697             plainpages=false}
```

```
698 \ifgrayscale
```

If this is the print version, need to disable the hyperlinks:

```
699 \hypersetup{draft}  
700 \fi
```

Float parameters: the following settings were copied from jmlr2e.sty

```

701 \renewcommand{\topfraction}{0.95} % let figure take up nearly whole page
702 \renewcommand{\textfraction}{0.05} % let figure take up nearly whole page
widows/orphans
703 \widowpenalty=10000\relax
704 \clubpenalty=10000\relax

Put marginal notes on the outside of the page
705 \mparswitchtrue

Use the plainnat bibliography style and set up the required punctuation.
706 \bibliographystyle{plainnat}
707 \bibpunct{{}}{;}{a}{,}{,}{}

```

4.2.1 Sections

```
\section
708 \renewcommand{\section}{\@startsection{section}{1}{\z@}%
709   {-0.24in \plus -1ex \minus -.2ex}%
710   {0.10in \plus .2ex}%
711   {\normalfont\rmfamily\bfseries\large\raggedright}%
712 }

\subsection
713 \renewcommand{\subsection}{\@startsection{subsection}{2}{\z@}%
714   {-0.20in \plus -1ex \minus -.2ex}%
715   {0.08in \plus .2ex}%
716   {\normalfont\rmfamily\bfseries\normalsize\raggedright}%
717 }

\subsubsection
718 \renewcommand{\subsubsection}{\@startsection{subsubsection}{3}{\z@}%
719   {-0.18in \plus -1ex \minus -.2ex}%
720   {0.08in \plus .2ex}%
721   {\normalfont\normalsize\rmfamily\mdseries\scshape\raggedright}%
722 }

\paragraph
723 \renewcommand{\paragraph}{\@startsection{paragraph}{4}{\z@}%
724   {1.5ex plus 0.5ex minus .2ex}%
725   {-1em}%
726   {\normalfont\normalsize\rmfamily\bfseries}%
727 }

\ subparagraph
728 \renewcommand{\ subparagraph}{\@startsection{ subparagraph}{5}{\z@}%
729   {1.5ex plus 0.5ex minus .2ex}%
730   {-1em}%
731   {\normalfont\normalsize\rmfamily\bfseries\itshape}}
```

\@secCntFormat Redefine the way the section number appears in the section heading.

```
732 \renewcommand*\@secCntFormat[1]{%
733   \csname pre#1num\endcsname
734   \csname the#1\endcsname.\enskip
735 }
```

4.2.2 Footnotes

\@makeFootnote Redefine \@makeFootnote so that the text between the footnote symbol and the footnote text can be redefined. (It looks odd having a full stop after a symbol.)

```
736 \renewcommand*\@makeFootnote[1]{%
737   \setpar
738   {%
739     \@@par
740     \tempdima\hsize
741     \advance \tempdima -15pt\relax
742     \parshape \one 15pt \tempdima
743   }%
744   \par
745   \parindent 2em\noindent
746   \hbox to \z@ {\hss {\thefnmark }\footnotesep\hfil }#1%
747 }
```

\footnotesep The separation text between the footnote symbol and the footnote text.

```
748 \newcommand*\footnotesep{. }
```

\thanks Added optional argument to \footnotetext as per <http://tex.stackexchange.com/questions/229295>.

```
749 \renewcommand*\thanks[1]{%
750   \refstepcounter{mpfootnote}%
751   \footnotemark[\number\value{mpfootnote}]%
752   \xappto{\thanks}{\noexpand\footnotetext[\number\value{mpfootnote}]{#1}}%
753 }
```

4.2.3 Article abstract

This code has been taken from jmlr2e.sty but with \bf updated to \bfseries

\abstract

```
754 \ifjmlrhtml
755   \renewenvironment{abstract}{\HCode{<h3>}Abstract\HCode{</h3>}}{}%
756 \else
757   \renewenvironment{abstract}
758   {{\centering\large\bfseries Abstract\par}\vspace{0.7ex}}%
759   \bgroup
760     \leftskip 20pt\rightskip 20pt\small\noindent\ignorespaces}%
761   {\egroup\vskip 0.25ex}
762 \fi
```

4.2.4 Keywords

This code has been taken from jmlr2e.sty but with \bf updated to \bfseries.

keywords

```
763 \newenvironment{keywords}{\bgroup\leftskip 20pt\rightskip 20pt \small\noindent{\bfseries
764 Keywords:}\ignorespaces}{\egroup\vskip 0.25ex}
```

4.2.5 Title Page Information

This code has been taken from jmlr2e.sty.

Title stuff, borrowed in part from aaai92.sty

```
767 \newlength\aftertit skip \newlength\beforetit skip
768 \newlength\interauthorskip \newlength\aftermaketit skip
```

Changeable parameters.

```
769 \setlength\aftertit{0.1in plus 0.2in minus 0.2in}
770 \setlength\beforetit{0.05in plus 0.08in minus 0.08in}
771 \setlength\interauthorskip{0.08in plus 0.1in minus 0.1in}
772 \setlength\aftermaketit{0.3in plus 0.1in minus 0.1in}
```

\titlebreak Acts like new line in the paper title, but with jmlrbook acts like a space in the table of contents and bookmarks.

```
773 \newcommand*{\titlebreak}{\newline}
```

\titletag

```
774 \newcommand*{\titletag}[1]{}{}
```

\title Override definition of \title to allow for an optional argument (short title)

```
775 \renewcommand*{\title}[2][\@title]{%
776   \def\@shorttitle{\#1}%
777   \def\@title{\#2}%
778   \protected@write\auxout{}{\string\jmlr@title{\#1}{\#2}}%
779   \jmlrttitlehook
780 }
```

\@shorttitle The short title of the document is initialised to \jobname to ensure a basic document will compile even if no title is set.

```
781 \newcommand*{\@shorttitle}{\jobname}
```

\jmlrttitlehook

```
782 \newcommand*{\jmlrttitlehook}{}{}
```

\jmlr@title AUX command provided for MakeJmlrBookGUI

```
783 \newcommand*{\jmlr@title}[2]{}{}
```

```

\author Override definition of \author to allow for an optional argument (list of authors for page

4.3 jmlrbook.cls Code

Class file for books composed of articles using the jmlr class.

```
1618 \NeedsTeXFormat{LaTeX2e}
```

Declare class:

```
1619 \ProvidesClass{jmlrbook}[2022/02/09 v1.30 (NLCT) JMLR Book Style]
```

Need xkeyval package to have key=value class options

```
1620 \RequirePackage{xkeyval}
```

Requires double spacing for the title page

```
1621 \RequirePackage{setspace}
```

Path used to determine if the preface is in the main document or in a separate file.

```
jmlrprefacefile
1622 \newcommand*\jmlrprefacepath{}

The fink package is now deprecated, so only use it if currfile isn't installed.
1623 \IfFileExists{currfile.sty}%
1624 {
1625   \RequirePackage{currfile}
1626   \renewcommand*\jmlrprefacepath{\currfilepath}
1627 }%
1628 {%

1629 \RequirePackage{fink}
1630 \ifdef\finkpath
1631 {%
1632   \renewcommand*\jmlrprefacepath{\finkpath}%
1633 }
1634 {%

fink version too old.
1635   \ClassWarning{jmlrbook}{`currfile' package required}
1636 }
1637 }

Some packages need to be loaded before hyperref so provide a hook to do this:
1638 \providecommand*\jmlrprehyperref{}

\jmlrimporthook Hook just before document is imported.
2311 \newcommand*{\jmlrimporthook}{}}

\importpubpaper Import a document that has already been published. Syntax: \importpubpaper[<label>]{<dir>}{<file>}{<pages>} where <dir> is the directory in which the paper is located, <file> is the name of the file and <pages> indicates the page range for the original version. The optional argument is a label. This is used to prefix the labels and citations in the document so they don't clash with other imported articles. If omitted, <dir>/<file> is used instead.

`\importarticle` Import a document that hasn't been published. Syntax: `\importarticle[<label>]{<dir>}{<file>}` where `<dir>` is the directory in which the paper is located and `<file>` is the name of the file. The optional argument is a label. This is used to prefix the labels and citations in the document so they don't clash with other imported articles. If omitted, `<file>` is used instead.

Change History

1.06 (2010-06-17)	\iftabcaptiontop: new	53	caused by packages defining duplicate commands etc	103	
1.07 (2010-06-30)	\jmlrmaketitle: added check for two column mode	62	\nametag: new	63	
	jmlrpapers: Added check for two column style	103	\reprint: new	68	
1.08 (2010-07-27)	\@makefntext: new	59	\subfigure: Added check to determine whether the subfigure caption is wider than the subfigure	43	
	\footnoteseptext: new	59	\subtable: Added check to determine whether the subtable caption is wider than the subtable	46	
1.09 (2010/12/01)	\jmlrmaketitle: modified footnote marker in the footnote text so that it is raised and isn't followed by a full stop	61	1.10 (2011-01-05)	General: Added 10pt, 11pt and 12pt options to jmlrbook	86
	\@partapp: new	79	font size options don't pass option to class	54	
	\@titlefoot: added \@reprint	67	hyperref now loaded by jmlr instead of jmlrbook	53	
	General: caption set up so that it doesn't use a box	40	passed \pt@size when loading article class	56	
	\algocfconts: new	40	Removed redundant redefinition of \bookpart	115	
	\booktocpreamble: new	78	\artpart: set \toclevel@part	78	
	abstract: changed \centerline to \centering... \par	59	\bookpart: set \toclevel@part	79	
	\firstpagefoot: added \@reprint	113	\jmlrpreatuthor: added \mdseries to \addr	63	
	\importarticle: Added \label to \jmlrmaketitlehook	108	\startpage: new	67	
	\importpaper: Added \label to \jmlrmaketitlehook	106	\thanks: Modified definition of \thanks	59	
	\importpubpaper: Added \label to \jmlrmaketitlehook	105	1.11 (2011-03-24)	General: added old algorithm2e commands	115
	\jmlrimportorthook: new	105	fink package now required	85	
	\jmlrpreatuthor: added \nametag	63	\jmlrabbrnamelist: new	65	
	\jmlrpremaketitlehook: Moved \refstepcounter from \jmlrmaketitlehook to \jmlrpremaketitlehook	105	\jmlrwcp: Fixed typo	55	
	Moved redefinition outside of import macros	105	\l@chapterauthor: removed penalty ..	112	
jmlrpapers: reset start and end document hook to avoid problems			\prefacename: new	92	
			\preface: new	92	
			1.12 (2012/01/05)	\@jmlr@authors: new	70
			\@shorttitle: provided default value ..	60	

General: changed \newcommand to	
\providecommand 85	
removed class option prehyperref 53	
\artappendix: added chapter to	
\theHsection to ensure unique	
hyperlink names in book 74	
\importarticle: changed	
\@jmlrauthors to \@jmlr@authors 108	
changed \shorttitle to \title . 108	
\importpaper: changed \@jmlrauthors	
to \@jmlr@authors 107	
changed \shorttitle to \title . 107	
\importpubpaper: changed	
\@jmlrauthors to	
\@jmlr@authors 105, 106	
changed \shorttitle to \title . 105	
\jmlrauthors: \jmlrauthors now	
redefines \@jmlr@authors instead of	
\@jmlrauthors 70	
\jmlrprehyperref: removed @ from	
name so it can be defined by user 53	
\Name: added optional argument 64	
\theHalgorithm: in definition, changed	
\thechapter to \theHchapter 100	
\theHfigure: new 100	
\theHfootnote: new 100	
\theHtable: new 100	
\titlebreak: new 60	
1.13 (2012/02/25)	
General: added \@pre@hyperref 57	
added support for pdfx-1a 87	
pdfxa: new 87	
preface: changed the chapter to an	
unnumbered one 92	
1.14 (2012-04-24)	
\booktableofcontents: reset page	
headers at end of toc 78	
\booktocpostamble: new 78	
\getTZh: fixed for times zones other than	
Z 89	
\jmlrbook@info: new 91	
1.15 (2012/05/12)	
\markleft: new 114	
\ps@jmlrbook: removed dependence on	
\ps@headings (made consistent with	
article page style) 114	
\theHalgocf: new 100	
\zeroextracounters: added algocf and	
definition to reset 100	
1.16 (2012/05/15)
