

The `tocdata` package

v2.07 — 2024/01/20

© 2016–2024 Brian Dunn
<https://github.com/bdtc/tocdata>

Optionally prints author, artist, or other data on a line of the TOC / LOF.

Abstract

The `tocdata` package adds information such as an author or artist to an entry in the table of contents or list of figures or new float type. This new information is placed on a single line along with the caption and page number, as is commonly done in collections of literature, poetry, or art work.

`tocdata` works with the TOC / LOF formatting of the default L^AT_EX classes, `memoir`, `koma-script`, and with `titletoc`, `tocloft`, `tocbasic`, and `tocstyle`.

1 Introduction

— Brian Dunn

Anthologies may be printed with the author alongside each title in the table of contents.

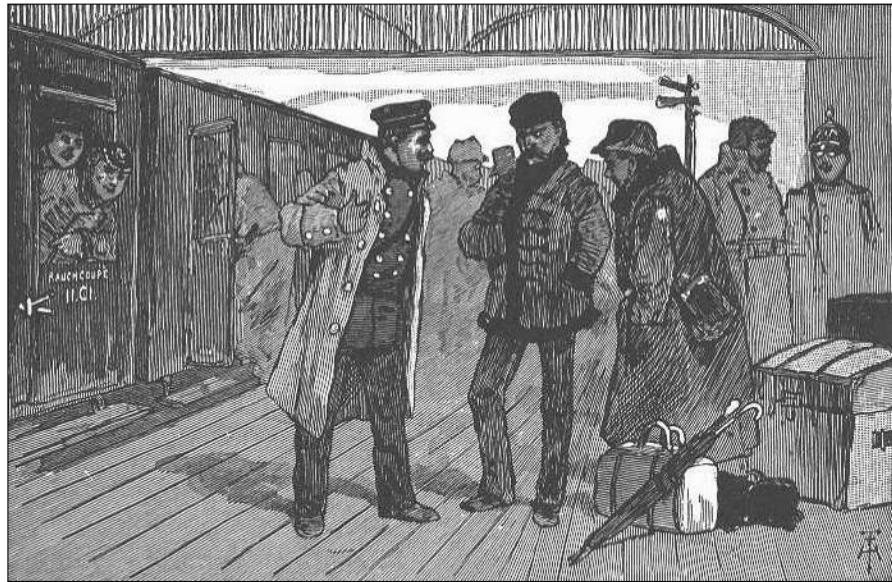

Many commonly-recommended methods for doing this with L^AT_EX, such as those linked to in section 2, place the author above or below the title and page number, but seldom on the same line.

The `tocdata` package provides some basic infrastructure to help add some information to a line in the table of contents, after the title and just before the page number. This function works with the standard L^AT_EX classes, or with either of the `titletoc` or `tocloft` packages.

Additionally, user-level macros are provided which add the author's name to a chapter or section, and add the author's or artist's name and optional additional text to a figure. Author and artist names are also added to the index.

As examples of the use of these high-level macros, the major section headings of this documentation have the author's name applied, and additional figures, illustrations, and quotes are supplied as well. The results are demonstrated in the table of contents, list of figures, list of illustrations, list of quotes, and the index.¹

¹Yes, I *do* recognize the absurdity of placing my own name in the index amongst the likes of Churchill, Genbi, Herschel, Kaoru, Newton...

2 Other methods

— *Various Authors*

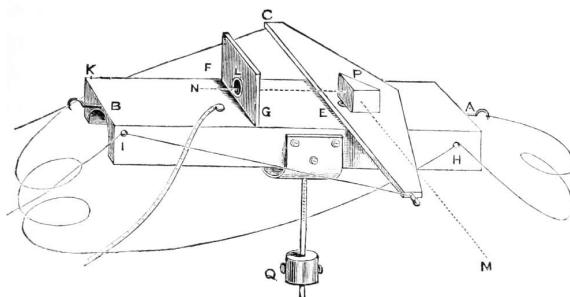

For other methods which place the author on a separate line from the title, see the following.

- ⚠ Too much text! Note that these methods will be preferable if a larger amount of information is to be placed for each title, such that it usually would not all fit on one line in the table of contents.

3 How to use tocdata

— Brian Dunn

This section shows how to use the `tocdata` package.

There are several layers of macros:

- The lowest level provides the basic infrastructure for inserting information into the table of contents, along with hooks for the `titletoc` and `tocloft` packages.
- The intermediate-level macro is `\tocdata`, which may be used to manually add a piece of data to a `\chapter`, `\section`, or `\caption`. `\tocdataformat` is also provided to control the appearance of this data in the TOC / LOF.
- At the highest level is a sample implementation of user-level macros which provides an easy way to create chapters, sections, and figures with associated authors and artists, along with supplemental information for figures, and automatic index entries.

3.1 Basic setup

3.1.1 Preamble

`tocdata` may be used with either the `tocloft` or `titletoc` package, or neither.

In the preamble, use:

```
\usepackage{tocdata}
\usepackage{titletoc}% optional
\usepackage{tocloft}% optional
```

3.2 Mid-level applications

Should the user only wish to add a bit of text into the TOC / LOF, the \tocdata macro may be used just before the sectioning or caption command, as shown below.

3.2.1 Font control in the TOC / LOF

```
\tocdataformat {\langle text\rangle}
```

To control the font and formatting used for the author on the table-of-contents line, the default is:

```
\newcommand{\tocdataformat}[1]{\normalfont\textrm{\small#1}}
```

You may change to other font options, add parentheses, etc.:

```
\renewcommand{\tocdataformat}[1]{%
    \normalfont\textsc{\footnotesize\quad --- (#1)}%
}
```

3.2.2 Adding TOC data per section

```
\tocdata {\langle list extension\rangle} {\langle text\rangle}
```

Before each \chapter or \section which is to have an author or other data:

```
\tocdata{toc}{Author's Name}
\chapter{Chapter Title} -or- \section{Section Title}
```

3.2.3 Adding LOF data per figure

Before each \caption which is to have an artist or author:

```
\tocdata{lof}{Artist's/Author's Name}
\caption{Figure Title}
```

You may wish to print the artist's name in the figure as well.

3.3 High-level user macros

Additional macros are given in section 4.8. These are user-level sectioning and captioning commands which add the names to the TOC and LOF, and also add the artist's name and optional additional text to a figure or other float (as in Figure 2), and also

add the names to the index. An optional prefix and suffix may be attached to the names (as in Figure 2), and these will be printed at the section heading or caption, but not in the TOC / LOF or in the index.

These macros may be ignored or modified as needed.

3.3.1 Sectioning commands with authors

\partauthor
\chapterauthor
\sectionauthor
\subsectionauthor

To use these macros, do not use \tocdata as shown above, but instead use, in the place of \part:

```
\partauthor[list entry]{Title}[Prefix]{First}{Last}[Suffix]
```

Likewise for chapters, sections, and subsections.

3.3.2 Figure captions with author/artist names and additional text

\captionartist For figures, in the place of \caption, use:

\captionauthor

```
\captionartist[list entry]{Title}[Text][Prefix]{First}{Last}[Suffix]
-or-
\captionauthor[list entry]{Title}[Text][Prefix]{First}{Last}[Suffix]
```

By default, \captionartist prints the artist centered below the figure, and \captionauthor prints the author below and flush right, without an extra vertical skip.

If you are using the optional prefix, the optional text must also be given, even if it is empty. For example, use:

```
\captionartist{Title}[]{Sir}{Isaac}{Newton}
```

(If only one optional argument is given before the first name, it will be interpreted as the optional text, not as the optional prefix.)

\captionartist*
\captionauthor*

If you are using the `caption` package or another package which supports \caption*, you may use \captionartist* and \captionauthor* with tocdata. The artist/author and supplemental text will still be printed below the figure, and an unnumbered caption will be generated, even though a LOF entry will not be made.

Should you mistakenly use \captionartist* or \captionauthor* without the `caption` package, expect to get a caption with a visible star in it. To fix the problem:

```
\usepackage{caption}
```

3.3.3 Formatting in sections and figures

\tocdatapartprint
\tocdatachapterprint
\tocdatasectionprint
\tocdatasubsectionprint

To change the formatting of the author names printed after each chapter or section,

or to remove them entirely, use these macros, as described in section 4.8 on page 18.

⚠ **redefining**

\tocdatachapterprint and \tocdatasectionprint by default depend on \tocdatapartprint, so if it is redefined the others will have to be redefined as well.

\tocdataartistprint
\tocdataartisttextprint

\tocdataauthorprint

\tocdataauthortextprint

3.3.4 Text justification

\tdartistjustify
\tdartistcenter
\tdartistleft
\tdartistright
\tdartisttextjustify
\tdartisttextcenter
\tdartisttextleft
\tdartisttextright
\tdauthorjustify
\tdauthorcenter
\tdauthorleft
\tdauthorright
\tdauthortextjustify
\tdauthortextcenter
\tdauthortextleft
\tdauthortextright

The text alignment of artists, artists' additional text, authors, and authors' additional text may be set using these macros. All following figures use the selected justification until it is changed to another.

4 Code

— Brian Dunn

Below, the `tocdata` code section contains the low-level code used to place the data into the table of contents and list of figures, as well as the code to control the font used while doing so.

Next are sections used to support the default L^AT_EX classes, as well as `titletoc` and `tocloft`.

Finally, the high-level macros are provided. The user may ignore or redefine these as desired.

4.1 Requirements

```

1 \RequirePackage{xparse}
2 \RequirePackage{etoolbox}
3 \RequirePackage{xpatch}
```

Require that `titletoc` and `tocloft` be loaded after `tocdata`, so that `tocdata` can patch the L^AT_EX core definitions first.

```

4 \@ifpackageloaded{titletoc}{
5     \PackageError{tocdata}{%
6         \%
7         Load titletoc after tocdata%
8     }%
9     \%
10    Move \protect\usepackage{titletoc} after \protect\usepackage{tocdata}.%
11    %
12 }{%
13
14 \@ifclassloaded{memoir}{%
15 }% memoir
16 % not memoir
17 }
```

```

18 \@ifpackageloaded{tocloft}{
19     \PackageError{tocdata}
20     {%
21         Load tocloft after tocdata%
22     }
23     {%
24         Move \protect\usepackage{tocloft} after \protect\usepackage{tocdata}.%
25     }
26 }{%
27 }
28 }% not memoir

```

Prevent the use of both `titletoc` and `tocloft`.

```

29 \AtBeginDocument{%
30 \@ifpackageloaded{titletoc}{%
31     \@ifpackageloaded{tocloft}{%

36         }
37         {%
38             The tocdata package may use the default LaTeX formatting,\MessageBreak

41     }{%
42 }{%

```

4.2 tocdata code

`\TD@thistocdata` Storage for the data to be added to the end of the TOC entry:

```
44 \newcommand{\TD@thistocdata}{}%
```

`\settocdata` Written to the `.toc` or `.lof` file, assigns `\TD@thistocdata`:

```
45 \newcommand{\settocdata}[1]{\renewcommand{\TD@thistocdata}{#1}}
```

`\tocdata {<toc or lof>} {<text>}`

To be called by a higher-level macro to assign data to a `.toc` or `.lof` file:

```
46 \newcommand{\tocdata}[2]{%
47     \@bsphack\addtocontents{#1}{\protect\settocdata{#2}}\@esphack%
48 }
```

`\tocdatafont {<text>}` Provided for compatibility with older documents. Instead, use and replace `\tocdataformat` for newer documents.

```
49 \newcommand{\tocdatafont}[1]{{\normalfont\textrit{\small#1}}}
```

`\tocdataformat {⟨text⟩}`

Controls the font and formatting for the TOC data:

```
\renewcommand{\tocdataformat}[1]{\textrit{#1}}
```

```
50 \def\tocdataformat{\tocdatafont}
```

`\TD@usetocdata` To be inserted into low-level TOC-generation code where the data should appear.

See the example using `titletoc`, below.

Prints the data, then clears the storage so it is not printed again.

```
51 \newcommand{\TD@usetocdata}{%
52   \ifdefvoid{\TD@thistocdata}{}{%
53     \tocdataformat{\TD@thistocdata}%
54     \global\def\TD@thistocdata{}%
55   }%
56 }
```

`\TD@checktocdatafont {⟨text⟩}`

Used to detect whether the user redefined `\tocdatafont`, in which case a warning is issued to use `\tocdataformat` instead.

```
57 \let\TD@checktocdatafont\tocdatafont
58
59 \AtBeginDocument{
60 \ifdefequal\TD@checktocdatafont\tocdatafont{}{%
61   \PackageWarningNoLine{tocdata}{%

```

4.4 titletoc support

If `titletoc` is loaded, patch macros for its use:

```

119 \AtBeginDocument{
120 \@ifpackageloaded{titletoc}{}

```

`\titlecontents` A set of `titletoc` commands which set up the formatting of the TOC entries. These are patched `\AtBeginDocument`, after user customizations in the preamble, to include the `tocdata` just after the leader (`titlerule*`), and just before the page number.

These macros also include spacing commands, and thus may need to be redefined by the user.

The default macros are patched via the L^AT_EX core. The following are only necessary if `\titlecontents` was used. Since every combination is tried, but will only succeed if `\titlecontents` was used, no warnings are printed if the patch fails.

```

121 \newcommand*\TD@titletoc@patch}[1]{%

4.8 User-level macros

Example user-level macros follow.

These macros are in addition to the standard sectioning and caption commands, adding first and last names for the table of contents and list of figures. For parts, chapters, sections, and subsections, the author's name with optional prefix and suffix are also added below the title. For figures, \captionauthor also prints the figure's artist's name with optional prefix and suffix just below the figure.

The regular sectioning and caption commands may still be used for anything which does not have an author/artist name.

4.8.1 User customization

```
\TDooptionalnameprint {\langle name\rangle}
```

Adds optional artist's name and the following space.

```
241 \newcommand{\TDooptionalnameprint}[1]{%
242 {%
243     \ifblank{#1}{%
```

```

244      {}%
245      {#1~}%
246 }

```

\tocdatapartprint {\langle prefix \rangle} {\langle first \rangle} {\langle last \rangle} {\langle suffix \rangle}

User-redefinable macro to print the author's name underneath the part title.

```

247 \newcommand{\tocdatapartprint}[4]{%
248 {%
249     \par\noindent%
250     {%

255         }%
256     }%
257 }

```

\tocdatachapterprint {\langle prefix \rangle} {\langle first \rangle} {\langle last \rangle} {\langle suffix \rangle}

User-redefinable macro to print the author's name underneath the chapter title.

```

258 \@ifundefined{chapter}{%
259     {}% if no chapters
260     {}% only of chapters exists in this documentclass:

```

\tocdatasectionprint {\langle prefix \rangle} {\langle first \rangle} {\langle last \rangle} {\langle suffix \rangle}

User-redefinable macro to print the author's name underneath the section title.

```
263 \let\tocdatasectionprint\tocdatapartprint

\tocdatasubsectionprint {\langle prefix \rangle} {\langle first \rangle} {\langle last \rangle} {\langle suffix \rangle}

User-redefinable macro to print the author's name underneath the subsection title.

```
264 \let\tocdatasubsectionprint\tocdatapartprint
```

\TDartistaauthorprint {\langle 1: "artist" or "author" \rangle} {\langle 2: prefix \rangle} {\langle 3: first \rangle} {\langle 4: last \rangle} {\langle 5: suffix \rangle}

```

274 \newcommand{\tocdataartistprint}{%
275     \par\smallskip%
276     \TDartistaauthorprint{artist}%
277 }
```

To remove the artist's name, redefine this as a null function taking four arguments:

```
\renewcommand{\tocdataartistprint}[4]{}
```

\tocdataauthorprint {⟨prefix⟩} {⟨first⟩} {⟨last⟩} {⟨suffix⟩}

User-redefinable macro to print the author's name underneath the figure.

```

278 \newcommand{\tocdataauthorprint}{%

```

\tocdataartisttextprint {⟨text⟩}

User-redefinable macro to print the optional text below the artist's name.

```
294 \newcommand{\tocdataartisttextprint}{\TDartistaauthortextprint{artist}}
```

\tocdataauthortextprint {⟨text⟩}

User-redefinable macro to print the optional text below the author's name.

```
295 \newcommand{\tocdataauthortextprint}{\TDArtistauthortextprint{author}}
```

4.8.2 Chapters and sections

-  **\part*** With book or report classes, a starred \part's name is printed on its own page, making it difficult to add an author's name. If the author's name is appended to the part's name, it also appears in name references as well. Thus, if using one of these classes and a starred \part, the author's name is not printed. Using an unstarred \part with an author's name does work as expected. The author's name is printed as part of the long name, but does not appear in the name reference, which uses the short name.

```
\TD@starredsectionauthorprint {\langle author's name\rangle}

```

```
318 \NewDocumentCommand{\TD@sectionauthor}{m s o m O{} m m O{} }{%
```

The starred version does not create a TOC entry, so it is simply used as-is:

```
319     \IfBooleanTF{\#2}{%
320         {%
321             \csuse{\#1}{\#4}{%

323         }%
324     }%
```

The un-starred version appears in the TOC, so add the author's name:

```
324      {%
325          no star:
326          \tocdata{toc}{#6 #7}%
327      }
```

Create the section depending on the optional name:

```
326      \IfValueTF{#3}%
327          {\csuse{#1}[#3]{#4\nopagebreak\csuse{tocdata#1print}{#5}{#6}{#7}{#8}}%
328          {\csuse{#1}[#4]{#4\nopagebreak\csuse{tocdata#1print}{#5}{#6}{#7}{#8}}%
329      }%
330      no star
```

Create an index entry depending on whether there is a first name:

```
330      \ifblank{#6}%
331          {\index{#7}%
332          {\index{#7, #6}%
333      }}
```

```

4.8.7 Figure captions with artists and authors

These macros adds optional supplemental text, which will be printed below the artist's name and above the caption, presuming that the caption is generated below the figure.

- ⚠ **Optional arguments** If using the optional prefix, the optional text must also be given, even if it is empty. For example, use:

```
\captionartist{Title}[] [Sir] {Isaac} {Newton}
```

If only one optional argument is given before the first name, it will be interpreted as the optional text, not as the optional prefix.

\TD@captionartistauthor {⟨1: "artist" or "author"⟩} * {⟨3: lofentry⟩} {⟨4: title⟩} {⟨5: supplemental text⟩} {⟨6: prefix⟩} {⟨7: first⟩} {⟨8: last⟩} {⟨9: suffix⟩}

Factored from \captionartist and \captionauthor, below.

```
394 \NewDocumentCommand{\TD@captionartistauthor}{m s o m +o{} o{} m m o{} }{%
```

Print the artist's name next to the figure:

```
395     \csuse{tocdata#1print}{#6}{#7}{#8}{#9} %
```

If supplemental text is provided, print it below the author:

```
396     \ifblank{#5}{%
397         {}%
398         {\par\csuse{tocdata#1textprint}{#5}}%
```

Remove any existing vertical space and only use \caption's built-in spacing:

```
399     \unskip%
```

If starred, there should be no TOC entry, so do not add toCDATA. Use \caption* from the caption or similar packages.

```
400     \IfBooleanTF{#2}%
401         {%
402             \IfValueTF{#3}{\caption*[#3]{#4}}{\caption*[#4]}%
403         }%
404         {%
405             \not starred
406         }
```

No starred, so remember the artist's name for inclusion in the LOF:

```
405     \tocdata{\csuse{ext@\@capttype}}{#7 #8}%
```

Create the caption depending on the optional name:

```
406     \IfValueTF{#3}{\caption[#3]{#4}}{\caption{#4}}%
407     }%
408     {%
409         \not starred
410     }
```

Create an index entry depending on whether there is a first name:

```
408     \ifblank{#7}%
409         {\index{#8}}%
410         {\index{#8, #7}}%
411 }
```

```
\captionartist * [<2: lofentry>] {<3: title>} [<4: supplemental text>] [<5: prefix>] {<6: first>} {<7: last>} [<8: suffix>]
```

```
412 \newcommand*{\captionartist}{\TD@captionartistauthor{artist}}
```

```
\captionauthor * [<2: lofentry>] {<3: title>} [<4: supplemental text>] [<5: prefix>] {<6: first>} {<7: last>} [<8: suffix>]
```

```
413 \newcommand*{\captionauthor}{\TD@captionartistauthor{author}}
```
